

Professional House Washing Service - What to Expect

Typical Cleaning steps:

1. Hose down all Vegetation near House and any areas to be power washed

All Power Washing of Siding/Gutters done at Low Pressure – *to protect your siding from damage. Special “Environmentally Safe” and Biodegradable cleaners do the work.*

2. Clean Gutters – Hand Brush & Rinse**
3. Soap House vinyl siding
4. Hand Brush any exceptional stains
5. Rinse at low pressure

If you selected ***optional Carnuaba Wax Application****:

6. Spray siding with Special Carnuaba Wax finish
7. Final Rinse

*The special product features an anti-static blend of a high-grade real carnuaba wax with UV inhibitors which protect your vinyl siding from sun damage. Renews the vinyl damaged by years of oxidation. Another benefit is it makes the siding easier to keep clean.

Details of your cleaning are included on your invoice.

Disclaimer Statement:

**In some rare instances some gutter stains might not respond to cleaning. These stains are due to an electrostatic reaction of the aluminum to various agents. We make every effort to restore your gutters to as near original condition as possible. These stains are a result of poor maintenance over a long period of time may demand use of toxic cleaners.

All cleaners rinsed from home are 100% safe to pets and vegetation. The additional step of wetting vegetation before cleaning guarantees they will not do any damage to your plants or trees. You will not hold Estelle’s home service liable for any vegetation problems.

I have read and agree to the above.
